- iv Introduction
  - v *About the Resilient Right-of-Ways project*
  - vi *About this guide*

## Elements of the Vermont Backroad

- 1 Element One: Manageable vegetation width
- 2 Element Two: Historic and culturally significant shade trees
- 4 Element Three: Roadside ash impact
- 6 Element Four: Overhead utilities
- 8 Element Five: Invasive plant species
- 10 Element Six: Hedgerow locations
  - 11 *Average road width, cleared zone, and vegetation width*
- 12 Element Seven: Tree health and mechanical damage
- 14 Element Eight: Agriculture in the right-of-way
- 16 Element Nine: Young forest
- 18 Element Ten: Mature forest

## Processes for Backroad Stewardship

- 20 Process One: Know your partners and understand their goals
- 22 Process Two: Support diverse and native roadside trees and plants
  - 23 *Roadside grasses*
- 24 Process Three: Prepare for emerald ash borer and manage ash tree health
  - 25 *Roadside ash tree inventories*
- 26 Process Four: Address hazard trees with the tree warden
- 27 Process Five: Develop a tree ordinance or policy
- 28 Process Six: Develop a roadside mowing policy
  - 29 *Understanding herbicide treatment in the right-of-way*
  - 30 *Phenology and management calendar of 12 common roadside invasive plant species in Vermont*
- 31 Process Seven: Understand the role of trees in updated stormwater regulations
  - 32 *Stormwater management in the right-of-way*
- 33 Process Eight: Maintain backroads and ditches to specifications
  - 34 *Minimum width of lanes and shoulders for rural local roads*
- 35 Process Nine: Create and maintain a public relations plan for roadside vegetation management
- 36 Process Ten: Keep abreast of funding opportunities
  - 36 *Relevant grants*
